Placing your elbow on the elbow rest will enable a more accurate measurement.

NOISE (MEASUREMENT ERROR)

OSCILLOMETRIC ENVELOPE

When you wake up in the morning, your blood pressure rises rapidly. If you get up quickly or wash your face with cold water, your blood pressure will rise even more, and this is dangerous if you have high blood pressure. After you wake up, it is best to remain in bed for a brief period until your mind is clear.
